

Lemma’s disambiguation

Abstract

This file provides an example of lemma’s disambiguation.
All word which can potentially be twice (or more) in a same line is marked
by an `\sameword`. *reledmac* print the word rank only if the word is effectively
printed twice (or more) time in the same line.
For use with `\lemma`, please read the handbook.

1 Leo aut ursus aut oryx aut ricinus aut equus aut lupus aut canis aut felix aut asinus
2 aut burricus.

1 aut⁶] et
2 aut] et

1 aut⁶] monotone...
